WORKING PAPER

Project: 91007
Date: 910124
Time: 1011-1117
Viewer: 018
Session: 01
Monitor: R

SUMMARY OF INFORMATION:

- TASKING:
- "Describe activities at the target site."
 - "Describe the purpose of the target site."
 - "Provide a sketch of the target."

RESULTS:

1. ACTIVITIES AT THE TARGET SITE: There are two dark-skinned males sitting in a back room at the target structure, playing a board game while they anxiously await something to happen. However, they have a sense of dread about it. The dread stems from the fact that they are in a situation they do not completely trust. They do not know whether the wall separating them from the rest of the structure will hold up, and believe that if it does not, they will be killed. They are very aware of the objects in the adjacent room (see item 3, below).

2. PURPOSE OF THE SITE: The site appears to be a shallowly buried missile launch facility (see item 3, below).

3. INFORMATION CONCERNING THE ENCLOSED SKETCHES:

Sketch 1: SIDE VIEW OF STRUCTURE: The site appears to be a 1-story cinderblock structure with a sloping front. The structure is approximately 12' high, and 60-65' front-to-back. Width of structure not determined. The top of the structure is at ground level, and may be covered with a shallow bit of earth, making it blend in with the surrounding terrain. The ground in front of the structure is very hard, and slopes down to the structure, to look like a natural indentation in the earth. Objects inside are sloped upward toward the front of the structure (see Sketch 3, below).

Sketch 2: FRONT VIEW OF STRUCTURE: The front of the structure is of cinderblock, with a "door" or "opening" fixed into it. This "opening" is permanent (will not open), but extremely thin. It appears to be of thin, hard plastic which has been painted with sand-textured paint. This "opening" is translucent enough to provide a soft light to the inside of the structure.

Sketch 3: TOP VIEW OF INSIDE OF STRUCTURE: A floorplan shows a large room with eight long, cylindrical, pointed, green objects lined up on the right side of the structure. These objects are pointed toward the front of the structure. They appear to have been placed here during or immediately after the construction of the structure. They are designed to move

forward under their own power, and will not be replaced once they do. This structure is of cheap, simple, practical construction, and is for one-time use, only. There is a "control" room to the left rear of the structure. This room has a very thick, reinforced front wall, but the side wall is thin (impression of only one cinderblock thickness), and has a door in it, leading out to the larger room. There is a "console" inside this room which appears much like a large video game machine. When the long objects depart, they will break through the plastic front "opening". They will be sent off in order from the furthest to the nearest the control room. The men inside the control room are skeptical that the thin wall will hold, once the last object is sent on its way. There is a feeling that they may be as expendable as the building.

Sketch 4: FRONT END OF THE LONG OBJECT: The front ends of the long objects are pointed and made of rather thick metal. The exterior surface of the metal is smooth, but the interior surface is "grooved" in a criss-cross pattern. The metal acts as a shell for a dense, solid inner material which is an orange flaked dark brown in color. This material appears to be very compressed "goo". It is sticky and rubbery in texture. It gives me the impression of a high explosive warhead on a missile.

SIDE

Sketch 1: SIDE VIEW OF STRUCTURE: The site appears to be a 1-story cinderblock structure with a sloping front. The structure is approximately 12' high, and 60-65' front-to-back. Width of structure not determined. The top of the structure is at ground level, and may be covered with a shallow bit of earth, making it blend in with the surrounding terrain. The ground in front of the structure is very hard, and slopes down to the structure, to look like a natural indentation in the earth. Objects inside are sloped upward toward the front of the structure (see Sketch 3, below).

Sketch 2: FRONT VIEW OF STRUCTURE: The front of the structure is of cinderblock, with a "door" or "opening" fixed into it. This "opening" is permanent (will not open), but extremely thin. It appears to be of thin, hard plastic which has been painted with sand-textured paint. This "opening" is translucent enough to provide a soft light to the inside of the structure.

INSIDE (FROM TOP)

Sketch 3: TOP VIEW OF INSIDE OF STRUCTURE: A floorplan shows a large room with eight long, cylindrical, pointed, green objects lined up on the right side of the structure. These objects are pointed toward the front of the structure. They appear to have been placed here during or immediately after the construction of the structure. They are designed to move forward under their own power, and will not be replaced once they do. This structure is of cheap, simple, practical construction, and is for one-time use, only. There is a "control" room to the left rear of the structure. This room has a very thick, reinforced front wall, but the side wall is thin (impression of only one cinderblock thickness), and has a door in it, leading out to the larger room. There is a "console" inside this room which appears much like a large video game machine. When the long objects depart, they will break through the plastic front "opening". They will be sent off in order from the furthest to the nearest the control room. The men inside the control room are skeptical that the thin wall will hold, once the last object is sent on its way. There is a feeling that they may be as expendable as the building.

Sketch 4: FRONT END OF THE LONG OBJECT: The front ends of the long objects are pointed and made of rather thick metal. The exterior surface of the metal is smooth, but the interior surface is "grooved" in a criss-cross pattern. The metal acts as a shell for a dense, solid inner material which is an orange flaked dark brown in color. This material appears to be very compressed "goo". It is sticky and rubbery in texture. It gives me the impression of a high explosive warhead on a missile.
